

Metal Band Oil Filter Wrench 110 - 155mm

Large metal band oil filter wrench to fit diameters between 110 – 155mm as found on larger engines. The curved foot profile and wide, flat metal band means it clamps firmly onto any cylindrical object without damage, ideal for the removal and fitment of old-style oil filters. The knurled knob gives fine adjustment control and the slim profile means it is easy to use even in very tight spaces. A robust tool with a spring steel clamp and aluminium parts for lightweight durability.

Additional Information

- Adjustment range: 110 - 155mm.
- Easy adjustment using turning knob on handle.
- Suitable for older style oil filters.
- Spare metal band available - please see Laser Part No. 0218.
- Smaller band wrench also available. Please see Part No.2830.
