

Flaring Tool - In-situ

A versatile flaring tool that produces male, female and double SAE flares on 5mm to 16mm diameter pipes. This tool can be used to flare pipes on or off the vehicle making it ideal for brake pipe servicing and maintenance. Designed for quick and simple flaring of custom cut pipes in copper, brass or aluminium. Features a simple sliding toggle clamping action and a forming bar with a choice of six flare sizes. Sturdy groove-grip plastic handles with a square profile so the tool can also be held in a vice.
