

Outil de maintien de la cloche d'embrayage

This adjustable motorcycle clutch holding tool has been designed to clamp onto the outer gear of the inner hub to prevent it from moving. This then allows you to undo the centre clutch fixing, which will then enable you to remove the clutch basket or the inner hub itself.

Additional Information

- Outil universel
- S'accroche sur la partie externe de la cloche d'embrayage
- Ajustable
- Manche ergonomique pour une bonne prise
