

Werkzeug zum Bördeln der Bremsleitung

Compact, hand-held brake pipe flaring tool for convenient on-vehicle brake pipe repair and maintenance even when access is restricted. The tool has a dual head for creating both DIN single flares and SAE double flares and the flare type is clearly marked for easy identification. Simple to use, a stop-plug sets the correct length of pipe and the flare is formed by turning the punch into the cast body to compress the pipe end. The set includes dies and punches for the two most common brake pipe sizes (4.75mm and 3/16") as well as a pot of punch grease. A robust, quality tool engineered to produce precision flares every time.

Additional Information

- Handgeführtes Werkzeug zum Bördeln der Bremsleitung
- Doppelkopf für SAE- und DIN-Bördelung
- Für Verwendung am Fahrzeug – zeitsparend
