

Universal Deburring Multi-Tool

This deburring multi tool includes a straight blade, two curved blades and a countersink. The straight blade and curved blade are forged from high carbon chromium steel for extreme wear resistance, perfect for deburring a wide range of materials and can be used for tool and die work, or even deburring a vehicle brake pipe after forming a new flare. There is also an HSS curved blade, designed for use on brass, cast iron and stainless steel. The 90° countersink can chamfer holes from 1mm to 10.4mm diameter and is on a cranked quick-change shaft for ease and speed of use. The tool handle is rubber-faced for grip and comfort and each blade locks positively in position when in use. Ideal for plumbers, mechanics and machinists who require quick access to various deburring tools.

Additional Information

- Four multi-purpose blades which can be locked in position when in use, with a choice of 25, 40 & 50mm quick change shafts.
- Black passivated curved blade in high-carbon chromium steel (SUJ2) for use on steel, aluminium & hard plastics.
- Brown passivated curved blade in HSS steel for use on brass, cast iron & stainless steel.
- Straight blade in high-carbon chromium steel (SUJ2) for use on steel, aluminium & hard plastics.
- Crankshaft 90 degree countersink for holes 1mm - 10.4mm diameter.
