

Axle Staked Nut Air Chisel Punch Set 2pc

A pair of specially shaped air hammer punches specifically designed to easily release and stake crush type axle nuts commonly found on both 2 and 4 wheel drive vehicles, reducing the chance of causing damage to axle shaft and threads. The kit includes a removal punch with a curved release tip to disengage the stake (crimp) and a flat bladed nut punch to reset the stake once the nut has been refitted to the axle.

Additional Information

- The release tip has a curved profile to allow easy access to the stack to fully disengage the crimp without damaging the axle shaft or thread.
- Flat stake punch is used to set the nut, preventing it from loosening.
- Applications include: wheel bearings, prop-shaft and drive flange stake nuts across many makes.
- Length: 178mm, shank: 10mm. Manufactured from SCM440 alloy steel.
- Designed for use with an air hammer to easily lock and unlock axle shaft stake nuts, such as Laser Air Hammer, Part No. 6031 (or similar).
