

Digital CO Gas Analyser

The Laser 8559 is a Digital, Battery Operated, CO Gas Analyser which measures CO emissions in the 0-10% (100,000 ppm) range, using a unique electro-chemical sensor. The unit features a rugged rubber boot with magnets, for protection, USB charger for the re-chargeable long-life batteries and integrated water trap with replaceable filters. It also features a unique wireless module, to allow for connectivity with a range of peripheral devices, thus providing future-proof functionality. Tests the performance and safety of any fossil fuelled /petrol engine and can also be used to test in-vehicle air quality, cab heaters, motorbikes, scooters, generators etc.

Additional Information

- Measures CO (0-10% / 100,000 ppm). Features a large 6 line digital display, stores up to 45 separate test results in internal memory & will also display ambient temperature, integrated water trap with replaceable filters.
- Supplied with long-life re-chargeable batteries, USB charger & lead, replacement filters, repair kit, gas sampling probe, storage bag/carry case.
- Optional Infra-red printer available. Real-time temperature values can also be displayed via T1 & T2 connections for a standard K-Type thermocouple.
- Tested & Certificated to EN50379 parts 1 & 3. CE / UKCA.
- Service, calibration & upgrades available via KAM Servicer Partner - 24 hour service & return.
