

Cooling System Flusher - Pulsating Jet

Designed to be used with both workshop air and water, the Laser 9001 combines these elements to produce a powerful yet fully controllable pulsating jet. The unit's internal mechanism can be adjusted to give a steady content flow, or a pulsating flow. Ideal for cleaning radiators, engine blocks, heater matrix. Can be used in-situ, or off the vehicle. Supplied in a blow mould case for convenient storage.

Additional Information

- Ideal for cleaning out corrosion build up, oil residue from head gasket leaks & water pump debris build up.
- Universal fitment - The kit includes adaptors for large bore main hoses & smaller heater matrix sizes.
- Adaptor sizes: 17mm & 20mm heater hose barbs, together with a small conical adapter for flushing heater matrix.
- Includes built in back pressure control valve to prevent air pressure pressurising the water feed.
- Combine water, air pressure & pulsations for better cleaning.
